

Tutorial 1

1. Write programme which stores the first name, surname, contact number and address of a maximum of 5 persons. The programme should also be able to display the contact list.
2. Modify the programme at 1 such that an unknown number of users can be stored. Hint ArrayList.
3. Modify the programme at 2 such that the first name, surname, contact number and address of a person is handled by different functions.
4. Modify the programme at 3 such that surname and address are optional.
